Our idea was create a new type of fence, to feature a high quality,durable, sustainable, practical and stylish design. To be aesthetically pleasing and to enable screening, privacy and enhancement to the garden landscape.

Quercus fencing is designed in a similar traditional style to a traditional wattle hurdle, whilst being made from heartwood of oak.

Manufactured from hardwood, it will outlast, be stronger & suit urban and rural landscapes equally.

The tannins in the oak provide natural protection so no preservative treatments are required.

The design of the weave allows air to move freely, giving less resistance to high winds.

The Quercus fence allows some shafts of sunlight to pass through, beneficial to planting in the shade of a fence.

The Quercus fence is unique. the design is registered and no other similar product is available.

The Quercus brand is modular & we we are able to provide bespoke designs & complimentary products.

The sympathetic design has been made from durable & sustainable oak.

Built to high quality standards, the fencing is screwed, rather than nailed with rust proof screws. the result is both practical & stylish.

The Quercus fence will weather naturally, to a silvery grey.

We use 100% green energy supply to power our workshop, and recycle all offcuts & sawdust. Our workforce comprises of local people

The raw materials are acquired from FSC& PEFC source's the Ltd company is also certified to this scheme. Currently the majority of our raw material is sourced from the Longleat Estate.

We can provide a fast completion to your order & equally full fill large orders whilst not forsaking quality

Our certification number is SA-COC-1654

Our company will shortly be providing DXF files for use with Auto CAD software.
